Excerpt: . . . while in general the least upward extension is observed in the Apennines and in the Balkan Peninsula. -V. M. Spalding. The Peat Deposits of Florida. ---Harper has published a report; of his reconnaissance of the peat deposits and peatforming areas of Florida. In addition to a considerable mass of information relative to peat, the report contains the best description of the vegetation of Florida which has yet been made. Fourteen natural divisions of the state are outlined by maps and briefly characterised as respects their topography, soils and vegetation. The low elevation and immature topography of Florida give rise to a bewildering variety of palustrine areas, which have naturally received more attention in this paper than the upland vegetation. Harper has described some 27 types of marshes, swamps, bogs, prairies, bays and other formations with...
